

ScanTalker at a Glance

- Identify more than a million products just by reading the bar code on the package or container
- Product information is presented in speech and braille
- Expandable database allows you to enter additional products and edit product information
- In a hurry? Use Quick Scan Mode for fast item searches
- Scan bar codes from any direction with the included omni-directional bar code scanner. No need to position the product “just right”

Bar Code Reading Solution for the PAC Mate™

When you can't easily tell the difference between similar-shaped bottles, cans, and other product containers around your home, ScanTalker 2.0 is the answer. ScanTalker for the PAC Mate makes it possible to quickly, easily, and accurately identify more than one million products simply by reading the bar codes on their labels.

Just hold the included omni-directional scanner in proximity to the UPC code on a product package or container. ScanTalker automatically matches the bar code with available information in its vast database and speaks the product brand and name. For many items in the database, ScanTalker also provides product label information that sighted people take for granted, such as ingredients, preparation instructions, and dosages. Using PAC Mate commands, you can hear as much or as little information as you want.

ScanTalker comes with a CompactFlash™ card pre-installed with databases, including:

- More than 285,000 grocery and pharmaceutical items
- More than 90,000 health and beauty aids
- More than 530,000 general merchandise items
- More than 320,000 audio and video compact discs

ScanTalker™ 2.0

Bar Code Reading Solution

With the omni-directional bar code reader, you need not hold the scanner stationary over a UPC code. As long as the scanner is near the bar code, the information is gathered and read aloud, regardless of the position of the code.

When you just need to identify products by name, use Quick Scan Mode.

The database is expandable, so if you don't find an item, you can add it. The next time you use ScanTalker, the new item will be instantly recognized. ScanTalker even comes with labels to affix to personal items that you add to the database.

ScanTalker 2.0 with the omni-directional scanner works with the PAC Mate BX and QX series running the 4.0 release or later. The complete package includes the ScanTalker application and databases on a 256 MB CompactFlash card, the scanner with cable and USB adapter, 100 pre-printed bar code labels, a documentation in print and on CD.

The omni-directional bar code reader identifies UPC codes quickly and easily.
